Art Unit: 2815

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/5/07 has been entered.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1,3,4,12,13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites "one area formed with the electronic device; and another area formed with the electronic device". The "another area" apparently should form the optical device rather than the electronic device. Clarification is required particularly since it is not clear where the optical device is located. Other claims are rejected for not rectifying the above problem.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1,3,4,12 and 13, as best understood, are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Linthicum, of record.

The new limitations do not structurally distinguish over Linthicum because the claim is vague and indefinite of exact structure and SOI is disclosed in Linthicum (column 3).

Claims 1,3,4,12 and 13, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto, Jp 2001-044124 in view of Linthicum.

Yamamoto teaches a GaN on SiC on Si. The difference is SOI substrate. The difference is not patentable because Linthicum teaches SOI for GaN on SiC on Si for better isolation and other advantages associated with SOI. As best understood applicant's claims are obvious over the prior art taken together.

Applicant's arguments filed 12/8/06 have been fully considered but they are not persuasive. Arguments regarding the one and another area are not convincing as the optical and electronic devices should be located in different areas. If applicant intends the devices all located in one area the device structure is vague and indefinite. The claim in any event is vague and indefinite of exact structure.

Arguments regarding Linthicum are not convincing of patentability as Linthicum teaches devices in the silicon substrate and devices in the GaN epitaxial layer. There is no specific electronic or optical structure claimed which would in any way structurally distinguish over the devices in art applied.

Arguments regarding parasitic capacity, reduced noise, etc. are unconvincing as the prior art possess the same inherent properties, and furthermore there are no specific magnitudes of capacity or noise claimed which would in any manner distinguish over the applied art.
